EXPLANATION OF PROTECTIVE CIRCUITS

* For about two seconds after the power switch is turned on, the speakers remain silent because the power muting circuit operates during this time.

If this unit is operated with speakers of 4 ohm or less, or by being operated to drive two pairs of speakers of 8 ohm or less simultaneously, its power limiter will start to operate. If under these conditions the volume is raised to a high level, the sound from the speakers may be distorted.

* If the speaker terminals are short-circuited or the ventilation holes at the cabinet top are blocked during long periods of operation. The internal temperature may rise abnormally. At about 90°, the thermal sensor (temperature detection) circuit becomes activated and will interrupt the signal. If the cause is removed and the internal temperature is back to normal, the unit automatically resets itself to restore normal operation.

Nominal Specifications For Information Only.

RECEIVER		RS-1035L
POWER AMPLIFIER SECTION Continuous RMS sine wave power per channel within stated bandwidth at no more than stated distortion and with an 8 ohm load.		35W x 2
Power Bandwidth		20Hz/20kHz
Total Harmonic Distortion		0.2 %
PREAMPLIFIER SECTION Input Sensitivity and Impedance At rated output, 8-ohms at 1kHz		
Phono		2mV/50k ohm
Phono (max input capability)		110mV
Auxiliary		150mV/100k ohm
Tape Monitor		150mV/100k ohm
Hum & Noise (below rated output)		
Phono		75 dB
Auxiliary		90 dB
Tape Monitor		90 dB
Frequency Response		
Phono (RIAA EQUALIZED ± 1 dB)		30Hz - 15kHz
Auxiliary input ± 1 dB		20Hz - 20kHz
Tape Monitor input ± 1 dB		20Hz - 20kHz
Bass Control Range (at 100Hz)		± 10 dB
Treble Control Range (at 10kHz)		± 10 dB
Loudness Contour (at 30 dB volume attenuation)		+8 dB at 100Hz
		+4 dB at 10kHz
High Filter		-6 dB (5kHz)
Separation (stereo) at 1kHz		40 dB
FM TUNER SECTION		
Usable Sensitivity	Mono	1.9 μ V/10.8 dBf
	Stereo	4.6 μ V/18.5 dBf
50 dB Quieting Sensitivity	Mono	2.8 μ V/14.2 dBf
	Stereo	38 μ V/36.8 dBf
Capture Ratio		1.0 dB
Alt Channel Selectivity (± 400 kHz)		68 dB
Image Response Ratio		56 dB
Spurious Response Ratio		85 dB
AM Suppression Ratio		55 dB
Signal-to-Noise Ratio (Mono & Stereo)		70/66 dB
Total Harm. Distortion (Mono & Stereo) at 65 dBf		0.3/0.4 %
T.H.D. at 50 dB Quieting Sensitivity	Mono	0.4 %
	Stereo	0.5 %
Stereo Separation (1kHz/10kHz)		40/30 dB
Sub-Carrier Suppression (19/38kHz)		60/70 dB
AM TUNER SECTION		
Usable Sensitivity	MW	300 μ V/m
	LW	500 μ V/m
Selectivity (± 10 kHz)		43 dB
Signal-to-Noise Ratio		48 dB
Image Response Ratio		48 dB
IF Response Ratio		45 dB
GENERAL SECTION		
Power Requirements (50/60Hz)		AC110V/220V
Power Consumption		190 W/228 VA
AC Outlets		
Dimensions H x W x D		46.8 x 15.4 x 33.3 cm
Weight		12 Kg

Because Fisher products are subject to continuous improvement, Fisher reserves the right to modify, change, or alter any design or specifications without notice and without incurring any obligation. Fisher reserves the right to make changes and improvements upon its products without any obligation to install such changes upon any of its products previously manufactured.

RECOMMENDED TEST EQUIPMENT

The following test equipment is recommended to completely test and align the Receiver:

- Line Voltage Isolation Transformer.
- AC DC Multimeter.
- Accurately Calibrated AC Voltmeter.
- Oscilloscope (Flat to 100 kHz Minimum)
- Low-Distortion Audio Sine-Wave Generator
- Harmonic Distortion Analyzer
- Two (2) Load Resistors, 8-ohms, 250 Watts (Minimum Rating)
- Low-Distortion AM-FM Signal Generator
- 10.7 MHz Sweep Generator
- Multiplex Generator
- 455 kHz Sweep Generator

HARMONIC DISTORTION TEST

CAUTION: Limit the following tests to no more than ten minutes each. Use 8-ohm resistors with a minimum power rating of 250 watts when connecting a load across the SPEAKERS terminals.

CONTROL SETTINGS:

Unplug the AC power cord and set the front panel controls as follows:

BASS, TREBLE, and BALANCE controls to center positions

POWER push button out (not depressed)

SPEAKERS switch to PHONES

FUNCTION switch to AUX

HIGH FILTER, MONO MODE, TAPE MONITOR and LOUDNESS CONTOUR out (not depressed)

VOLUME control to MINIMUM position

LEFT CHANNEL DRIVEN

ONE CHANNEL DRIVEN:

- 1) Connect a low distortion audio generator to LEFT AUX IN jack. Set generator frequency to 1 kHz and output to minimum.
- 2) Connect an 8-ohm load resistor between SPEAKERS MAIN LEFT and COM terminals. Connect a Harmonic Distortion analyzer and an AC VTVM in parallel across the 8-ohm load.
- 3) Connect the AC power cord and set SPEAKERS switch to MAIN. Turn VOLUME control to MAX.
- 4) Increase generator output for RS-1035 35W RMS (16.7V across the 8-ohm load). Harmonic Distortion Analyzer should measure 0.2% distortion or less.
- 5) Repeat steps 1 through 4 for RIGHT CHANNEL.

BOTH CHANNELS DRIVEN

Connect 8-ohm load resistors across LEFT and RIGHT MAIN SPEAKERS terminals. Depress "MONO MODE" pushbutton. Adjust generator output and "BALANCE" control for RS-1035: 35W at Left and Right Channels (RS-1035: 16.7V) across the 8-ohm loads. Harmonic Distortion Analyzer should measure RS-1035: 0.2% distortion or less at each channel.

DISASSEMBLY INSTRUCTIONS

Removal Of Chassis From Cabinet

1. Remove 4 screws from left and right sides of cabinet.
2. Separate cabinet from chassis.
3. Remove 6 screws from bottom of cabinet. (Do Not Remove Leg From Bottom Of Cabinet).
4. Separate bottom of cabinet from chassis.

Removal Of Front Panel Assembly

1. Remove all Knobs with the exception of push buttons.
2. Remove 4 screws from top of panel.
3. Remove nut from "Function" and "Speaker" switches located on Front Panel Assembly.
4. Separate Front Panel Assembly from chassis.

Removal Of Meter

1. Unsolder leads from meter terminals.
2. Remove One screw and Meter Cover.
3. Grasp Meter firmly and pull back separating Meter from panel.

Removal Of Slide Rail Pointer

1. Remove Metal Slide Pointer from Slide Rail Pointer.
2. Remove 2 screws from top of Slide Rail Pointer.

Removal And Replacement Of Dial Lamps

1. Remove Dial P.C. Board from Shelter Light with two flaps straight.
2. Grasp Dial Lamp and extract from lamp grommet holder.

Testing and troubleshooting any of the P.C. boards do not require removal since all component parts are top board mounted. For underneath board inspection purposes or when a defective component is to be unsoldered and replaced, the P.C. Board can be sufficiently turned over by only removing the hold down hardware. Where it necessitates complete removal of any individual board then proceed as follows.

Removal Of AM-FM RF/IF/MPX Amp P.C. Board

1. Unscrew 2 screws from Drum. (Do Not Remove Dial String From Drum).
2. Remove 6 screws from P.C. Board.
3. Slide P.C. Board from plastic clip.
4. Unsolder connections and remove P.C. Board.

Removal Of EQ-Amp P.C. Board

1. Unsolder wire wraps from terminals.
2. Remove 4 hold down screws.

Removal Of Power Supply P.C. Board

1. Unsolder wire wraps from terminals.
2. Remove 5 hold down screws.
3. Slide P.C. Board from plastic clip.

Removal Of Power Amp P.C. Board

1. Unsolder wire wraps from terminals.
2. Remove 4 screws holding Power IC (STK-082).
3. Remove screw holding posistor
4. Unscrew and remove plastic clip from P.C. Board.

Removal Of Boostor P.C. Board

1. Unsolder wire wraps from terminals.
2. Remove 2 hold down screws.

Removal Of Tone Control Amp P.C. Board

1. Unsolder wire wraps from terminals.
2. Remove 2 screws from left and right sides of 4 push button switch.
3. Remove 4 nuts variable resistors.
4. Unscrew and remove 2 plastic clips from P.C. Board.

FUNCTIONAL BLOCK DIAGRAM

DIAL CORD STRINGING

AM-FM MULTIPLEX ALIGNMENT

AM ALIGNMENT

For Alignment: Maintain generator output as low as possible for suitable indication.

AM ALIGNMENT						
Step	Adjusting circuit	Connection		Position of Tuning dial	Adjustment	V.T.V.M. Oscilloscope
		Input	Output			
1	IF	Connect 455 kHz sweep generator to VC4.	Connect Oscilloscope to Test Point TP 19.	Near max. capacity of VC at position of on interference	AM 1st 9-21310 AM DET 9-21291	
2	MW(RF)	Connect AM generator to EXT AM antenna and GND terminals. Set to 600 kHz. Modulate with 30%, 400 Hz.	Connect Oscilloscope and AC. V.T.V.M. to speaker terminal.	600 kHz	AM BAR ANT 9-25110 MW OSC 9-20851	Max.
3		Change frequency to 1400 kHz.		1400 kHz	TC 01, 03	
4	LW(RF)	Change frequency to 160 kHz.		160 kHz	LW OSC 9-20860	Max.
5		Change frequency to 350 kHz.		350 kHz	TC 02, 04	
6	Repeat adjustments.					

1. Variable capacitor completely closed
2. Set the dial pointer to very left line dial scale.
3. Connect sweep generator, SG, V.T.V.M. and oscilloscope.
4. Function switch to "MW" or "LW"
5. Use a screwdriver with plastic grip for all adjustments.

FM ALIGNMENT

FM ALIGNMENT

Step	Adjusting circuit	Connection		Position of Tuning dial	Adjustment	V.T.V.M. Oscilloscope
		Input	Output			
1	IF	Connect sweep 10.7 MHz generator to test point VC2, through 0.01 μ F.	Connect Oscilloscope to Test Point TP 7.	Near max. capacity of VC, at position of on interference	IFT In FRONT END	
2	Quadrature Detector		Connect Oscilloscope to Test Point TP 6.		FM DET 9-21320	
3	RF	Connect FM RF generator through two 120-ohm resistors to FM antenna screw terminals. Set generator to 90 MHz, modulate with 400 Hz to provide ± 75 kHz deviation. Set generator output attenuator as low as possible.	Connect V.T.V.M. to Speaker terminal.	90 MHz	LA LR	Max.
4		Change generator setting to 106 MHz.		106 MHz	TCA TCR.	Max.
5	Repeat adjustments.					

1. Variable capacitor completely closed
2. Set the dial pointer to very left line of dial scale.
3. Connect sweep generator, FM, SG, V.T.V.M. and oscilloscope. FM ANT input impedance is 75 ohm.
4. Function switch to "FM"
5. Use a screwdriver with plastic grip for all adjustments.

FM MPX ALIGNMENT

FM MPX ALIGNMENT

Step	Adjusting circuit	Connection		Position of Tuning dial	Adjustment	
		Input	Output			
1	PLL IC FO (19 kHz) Adjustment	None	Connect Frequency counter or synchroscope to TP 8.	Near max. capacity of VC, at position of on interference	Adjust VR01 (5k-B) so that frequency counter or synchroscope indicate 19 kHz.	
2	FM STEREO Signal Separation	As above Steps 3,4 except modulation Modulate LEFT Channel ± 67.5 kHz -400 Hz audio and ± 7.5 kHz -19 kHz pilot carrier.	Connect V.T.V.M. to output terminal (R Channel)		VR02. (1k-B)	V.T.V.M. Min.
		As above except modulate RIGHT Channel.	Connect V.T.V.M. to output terminal (L Channel).			
3	Repeat steps 1,2. Set at position with max. channel separation.					

1. Variable capacitor completely closed
2. Connect FM stereo SG and V.T.V.M.
3. Function switch to "FM"
4. Use a screwdriver with plastic grip for all adjustments.
